

## Special Issue on Turbulence

### Call for Papers

In fluid dynamics, turbulence or turbulent flow is a flow regime characterized by chaotic property changes. This includes low momentum diffusion, high momentum convection, and rapid variation of pressure and flow velocity in space and time.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Turbulence**. Potential topics include, but are not limited to:

- Fluid dynamics
- Turbulence and turbulent combustion
- Control of turbulent flows
- Multi-physics interactions
- Turbulence and shear flow phenomena
- Turbulence and wind energy
- Turbulence modeling and measurements
- Vortex flows and related numerical methods

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Turbulence**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	November 30th, 2016
Publication Date	December 2016
