

Special Issue on Forest Restoration and Rehabilitation

Call for Papers

Forest restoration and forest rehabilitation are challenging long-term endeavours that require thoughtful planning, implementation and monitoring. While they are closely related, a conceptual distinction may be made between them. The purpose of forest restoration is to restore a degraded forest to its original state – that is, to re-establish the presumed structure, productivity and species diversity of the forest originally present at a site. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **forest restoration and rehabilitation**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **forest restoration and rehabilitation**. In this special issue, potential topics include, but are not limited to:

- Restoration & planted forests
- Forest loss and management
- Forest distribution
- Forest fire management
- Forest law enforcement
- Forest regeneration measures
- Forest landscape restoration
- Forest restoration techniques

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Forest Restoration and Rehabilitation**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 25th, 2018
Publication Date	February 2019
