

Special Issue on Statistical Hypothesis Testing

Call for Papers

Hypothesis testing is refers to the method in which we select samples to learn more about characteristics in a given population. It is a systematic way to test claims or ideas about a group or population. The goal of hypothesis testing is to determine the likelihood that a population parameter, such as the mean, is likely to be true.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **statistical hypothesis testing**. Potential topics include, but are not limited to:

- Inferential statistics and hypothesis testing
- Methods of hypothesis testing
- Hypothesis testing and sampling distributions
- Testing a research hypothesis
- Making a decision
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Statistical Hypothesis Testing**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	August 31st, 2016
Publication Date	October 2016

Guest Editor:

Prof. **Qihua Wang**
Chinese Academy of Sciences, China
