

## Special Issue on Psychological Statistics

### Call for Papers

**Psychological statistics** is a branch of applied statistics, which is an application of statistical methods in psychology and pedagogy measurement field. In recent decades, psychology statistics has been widely used to measure people's personality, attitudes, beliefs, education output, and health-related fields. Due to the unobservability, it is difficult to measure those characteristics. And activists in physics and social sciences think that this measurement is often inaccurate and abusive. While advocates say the abuse of data often comes from the neglect of psychological statistics.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **psychological statistics**. Potential topics include, but are not limited to:

- Test theory of psychological statistics
- Experimental design of psychological statistics
- Factor analysis of psychological statistics
- Quantitative research of psychological statistics
- Case study of psychological statistics
- Software packages for psychological statistics research

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue – Psychological Statistics**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	April 25th, 2018
Publication Date	June 2018
