

Special Issue on Thrombosis

Call for Papers

Thrombosis is the formation of a blood clot (thrombus) inside a blood vessel, obstructing the flow of blood through the circulatory system. When a thrombus is significantly large enough to reduce the blood flow to a tissue, hypoxia can occur and metabolic products such as lactic acid can accumulate. A larger thrombus causing a much greater obstruction to the blood flow may result in anoxia, the complete deprivation of oxygen and infarction, tissue death. There are also a number of other conditions that can arise according to the location of the thrombus and the organs affected.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **thrombosis**. Potential topics include, but are not limited to:

- Causes of thrombosis
- Embolus and embolization
- Venous thrombosis
- Arterial thrombosis
- Prevention of thrombosis
- Treatment of thrombosis

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Thrombosis**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	September 25th, 2014
Publication Date	November 2014
