

Special Issue on Peripheral Arterial Disease

Call for Papers

Peripheral Arterial Disease (PAD), also known as peripheral vascular disease, is a common circulatory problem which occurs when there's a blockage in the arteries to the limbs. PAD most commonly affects the legs and can cause discomfort or pain when walking. The risk of developing PAD increases as you get older. Smoking or having diabetes increases the chances of developing the disease sooner.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Peripheral Arterial Disease**. Potential topics include, but are not limited to:

- Intermittent claudication
- Critical limb ischemia
- Chronic limb ischemia
- Complications of PAD
- Atherosclerosis and PAD
- Risk factors
- Tests and diagnosis
- Treatments and drugs
- Lifestyle and home remedies
- Alternative medicine

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Peripheral Arterial Disease**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	December 15th, 2015
Publication Date	February 2016

Guest Editor:

Scientific Research
Open Access

**World Journal of
Cardiovascular Diseases**

ISSN Online: 2164-5337
