

Special Issue on Advances in Chemical Analysis Methods

Call for Papers

Analytical chemistry is the study of the separation, identification, and quantification of the chemical components of natural and artificial materials using some chemical methods. Conventional methods use separations such as precipitation, extraction, distillation and so on. Instrumental analysis includes many analysis methods, such as mass spectrometry, electrochemical analysis, thermal analysis, emission spectrometry and so on. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **advances in chemical analysis methods**.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **advances in chemical analysis methods**. In this special issue, potential topics include, but are not limited to:

- Qualitative analysis
- Gravimetric analysis
- Volumetric analysis
- Mass spectrometry
- LC_MS analysis
- Thermal analysis

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Advances in Chemical Analysis Methods**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 19th, 2014
Publication Date	August 2014

Guest Editor:

Dr. Wayne Grant Carter

University of Nottingham Medical School, UK
