

Special Issue on Separation and Purification Technology

Call for Papers

Separation and purification Technology plays a critical role in chemistry, biochemistry, environment, energy, water, biotechnology, etc. Separation and purification Technology welcomes research and review papers on topics such as adsorption, filtration, membranes, extraction, distillation, absorption, centrifugation, crystallization, ion exchange, chromatography, precipitation, reactive separations, hybrid processes, continuous separations, carbon capture, flocculation, magnetic separations of solid, liquid or gaseous materials.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Separation and Purification Technology**. Potential topics include, but are not limited to:

- Sample treatment and method validation
- Process development and simulation
- Technologies of separation and purification
- Preparation and modification of separation and/or purification materials
- Applications of separation and purification technology
- Approaches for improving the performance of separation and purification techniques

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Separation and Purification Technology**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 20th, 2016
Publication Date	August 2016
