

Special Issue on Bioanalytical Chemistry and Molecular Diagnosis

Call for Papers

Molecular diagnosis is a new branch of laboratory medicine which applies molecular biology and biochemical analysis principles to the diagnosis of diseases. Molecular diagnosis has developed rapidly in recent years and has been widely used in the diagnosis of hereditary diseases, detection of infectious pathogens, detection of tumor susceptibility genes, companion diagnostics and prognosis assessment, etc., play an increasingly important role in the diagnosis and treatment of disease. Molecular diagnosis technology deepens and extends the connotation and extension of laboratory medicine.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **bioanalytical chemistry and molecular diagnosis**. Potential topics include, but are not limited to:

- Rapid detection kit research
- Diagnosis of hereditary diseases
- Clinical examination
- Nano biotechnology and chip analysis
- Immunoassay technique
- Tumor detection
- Pharmacogenomics

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Bioanalytical Chemistry and Molecular Diagnosis**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 25th, 2018
Publication Date	March 2018
