

Special Issue on Chromatographic Analysis and Its Applications

Call for Papers

Chromatography is the collective term for a set of separation techniques that operate based on the differential partitioning of mixture components between a mobile and a stationary phase. The mobile phase (a liquid or a gas) travels through the stationary phase (a liquid or a solid) in a defined direction. Chromatographic methods are important in the analytical and preparative separation of biological samples. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **chromatographic analysis and its applications**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **chromatographic analysis and its applications**. In this special issue, potential topics include, but are not limited to:

- Techniques by chromatographic bed shape
- Techniques by physical state of mobile phase
- Supercritical fluid chromatography
- Reversed-phase chromatography
- Hydrophobic interaction chromatography
- Chiral chromatography
- Applications of chromatographic analysis

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Chromatographic Analysis and Its Applications**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 14th, 2019
Publication Date	May 2019
