

## Special Issue on Earth Modelling

### Call for Papers

In recent years, there has been a dramatic increase in the use of numerical simulation models in the earth sciences as a means to evaluate large-scale or complex physical process. Numerical modeling is a prime tool for studying Earth evolution and dynamics. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **earth modelling**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **earth modelling**. In this special issue, potential topics include, but are not limited to:

- Geologic modelling
- Methods and tools of earth modelling
- The earth dynamics
- The origin of the earth
- Earth modelling technology
- Numerical models in earth science
- Application of earth modelling

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Earth Modelling**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	October 31st, 2017
Publication Date	December 2017

#### Guest Editor:

Prof. Valentine Udoh James, Fluorotronics Inc., USA
