

Special Issue on Research on Detergent

Call for Papers

Detergents act like soap but are made of chemicals obtained from petroleum products. Their molecules surround particles of grease and dirt, allowing them to be carried away. Detergents are commonly available as powders or concentrated solutions. They contain a variety of new surfactants, which have a series of advantages such as strong detergency, rinse easily, no stimulation to the skin. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of detergents.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **research on detergent**. Potential topics include, but are not limited to:

- Anionic detergents
- Cationic detergents
- Non-ionic and zwitterionic detergents
- Applications of detergents
- Green detergents

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Research on Detergent**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	June 24th, 2015
Publication Date	August 2015
