Special Issue on Topology Theory

Call for Papers

Basically, topology is the modern version of geometry, the study of all different sorts of spaces. The thing that distinguishes different kinds of geometry from each other (including topology here as a kind of geometry) is in the kinds of transformations that are allowed before you really consider something changed. Topology is almost the most basic form of geometry there is. It is used in nearly all branches of mathematics in one form or another. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of topology theory.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **topology theory**. In this special issue, potential topics include, but are not limited to:

- General topology
- Algebraic topology
- Differential topology
- Geometric topology
- Economics topology
- Molecular topology
- Applications

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Topology Theory***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	June 27th, 2017
Publication Date	August 2017
