

## Special Issue on Soil Fertility and Soil Conservation

### Call for Papers

Fertile soil is the foundation of a sustainable agricultural system. Cultivation, especially with heavy machinery, can degrade soil structure. Excessive cropping or grazing can depress soil-nutrient levels and degrade soil structure. Soil conservation techniques have been developed to address the range of soil management issues.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **soil fertility and soil conservation**. Potential topics include, but are not limited to:

- Soil organic matter and topsoil
- Mineralization
- Soil organisms
- Soil pH and soil moisture
- Soil contamination
- Soil erosion, depletion and conservation
- Soil and agriculture cropping

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal at [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue – Soil Fertility and Soil Conservation**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 30th, 2017
Publication Date	May 2017
