

Special Issue on Irrigation and Water Conservancy

Call for Papers

Agricultural water supply is emerging as a critical natural resource issue. Irrigated agriculture is essential in meeting our food and fiber production needs. As the Nation's largest water user, agriculture accounts for about 80 percent of the country's annual water consumption. Irrigation water management encourages the application of water in an amount that meets the need of the growing plant in a manner that avoids extended soil saturation and runoff. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **irrigation and water conservancy**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **irrigation and water conservancy**. In this special issue, potential topics include, but are not limited to:

- Agricultural water management
- Irrigation water management
- Maximizing irrigation efficiency and water conservation
- Irrigation systems
- Measurement of irrigation water use
- Minimizing evaporative losses

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Irrigation and Water Conservancy**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 16th, 2018
Publication Date	March 2018
