

Special Issue on Irrigation and Water Conservancy

Call for Papers

Agricultural water supply is emerging as a critical natural resource issue. Irrigated agriculture is essential in meeting our food and fiber production needs. Irrigation water management encourages the application of water in an amount that meets the need of the growing plant in a manner that avoids extended soil saturation and runoff. By increasing application precision and reducing unneeded applications, water can be conserved and energy can be saved. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Irrigation and Water Conservancy**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Irrigation and Water Conservancy**. In this special issue, potential topics include, but are not limited to:

- Modern irrigation system planning and construction
- Evaporation and seepage control
- Modern drainage system planning and construction
- Types of drainage systems
- Irrigation water management
- Agricultural water supply
- Trends and challenges of sustainable agriculture irrigation
- Maximizing irrigation efficiency and water conservation

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Irrigation and Water Conservancy**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	February 25th, 2021
Publication Date	April 2021
