

Special Issue on Circuit Design

Call for Papers

Circuit design can cover systems ranging from complex electronic systems down to the individual transistors within an integrated circuit. The process normally begins with the conversion of the specification into a block diagram of the various functions that the circuit must perform, at this stage the contents of each block are not considered, only what each block must do, this is sometimes referred to as a "black box" design. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of circuit design.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **circuit design**. In this special issue, potential topics include, but are not limited to:

- Analog circuit design
- Digital circuit design
- Integrated circuit design
- Radio-frequency circuit design
- Testing or type-testing of prototypes
- Costs of circuit design

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Circuit Design**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 18th, 2016
Publication Date	April 2016

Guest Editor:

Prof. Gyungho Lee, Korea University, Korea (South)
