

Special Issue on Electrical Engineering

Call for Papers

Electrical Engineering is a field of engineering that generally deals with the study and application of electricity, electronics, and electromagnetism. This field first became an identifiable occupation in the latter half of the 19th century after commercialization of the electric telegraph, the telephone, and electric power distribution and use. It now covers a wide range of subfields including electronics, digital computers, power engineering, telecommunications, control systems, RF engineering, and signal processing. Electrical engineering may include electronic engineering, whereas electronic engineering deals with the study of electronic systems including computers, communication systems, integrated circuits, and radar.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **electrical engineering**. Potential topics include, but are not limited to:

- Electromagnetism
- Telecommunications
- Electronic engineering
- Electrical machines
- Power engineering
- Education and training of electrical and electronics engineers
- Microelectronics
- Signal processing
- Instrumentation engineering
- Electronic design automation

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Electrical Engineering**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	July 3rd, 2014
Publication Date	September 2014
