

Special Issue on Aeronautical and Astronautical Engineering

Call for Papers

Aeronautical and Astronautical Engineering is the branch of engineering behind the design, development, construction, testing, science and technology of aircraft and spacecraft. It includes two major and overlapping branches: aeronautical engineering and astronautical engineering. Development of aerospace engineering research also improves vehicle design, propulsion of air and space travel and some of our work has ramifications beyond air and space.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **aeronautical and astronautical engineering**. Potential topics include, but are not limited to:

- Gas dynamics
- Dynamics and controls
- Structures and materials
- Design and testing
- Aerospace mechanics
- Space systems
- Research impact

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Aeronautical and Astronautical Engineering**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	September 15th, 2017
Publication Date	November 2017
