

Special Issue on Environment and Biodiversity

Call for Papers

Biodiversity is the variety of life on Earth. This life, in all its shapes and sizes, occurs in the context of ecosystems: it relies on and interacts with other organisms and the physical environment. Biodiversity represents the collective ‘knowledge learned’ by evolving species over millions of years, about how to survive the vastly varying environmental conditions Earth has and is experiencing. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Environment and Biodiversity**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Environment and Biodiversity**. In this special issue, potential topics include, but are not limited to:

- Functional biodiversity research
- Monitoring and evaluation of nature conservation measures
- Effects of climate change on biodiversity
- Ecology of endangered and invasive species
- Biodiversity conservation
- Biodiversity and ecosystems
- Importance of biodiversity
- Environmental impacts and threats to biodiversity

Authors should read over the journal’s [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Environment and Biodiversity**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	October 21st, 2024
Publication Date	December 2024
