The figure on the front cover shows contour plot of the percent error in computing the RMS induced voltage  $U_{rms}$  through (4) and (11), with respect to the size of the scatterer  $a/b$  and its eccentric position  $d/b$ . Plot parameters:  $b = 1$  m,  $\epsilon_1 = 5$ ,  $\mu_1 = 2$ ,  $Q = 10^5$  V/m. Journal of Electromagnetic Analysis and Applications (JEMAA) is a professional journal in the field of electromagnetic analysis, testing and application. The goal of this journal is to provide an international platform for engineers and academicians all over the world to promote, share, and discuss various new issues and developments in the field of electromagnetic. This journal is edited to encourage deeper understanding and greater effectiveness in theory analysis, testing, numerical calculation and engineering application that relevant electromagnetic fields.

## Subject Coverage

JEMAA publishes four categories of original technical reports: papers, communications, reviews, and discussions. Papers are well-documented final reports of research projects. Communications are shorter and contain noteworthy items of technical interest or ideas required rapid publication. Reviews are synoptic papers on a subject of general interest, with ample literature references, and written for readers with widely varying background. Discussions on published reports, with author rebuttals, form the fourth category of JEMAA publications. Topics of interest include, but are not limited to:

Antenna Arrays  
 Antenna Theory and Applications  
 Biological Effects  
 Eddy Current Problems
