

Special Issue on Transport Economics & Policy

Call for Papers

Transport economics is a branch of economics that deals with the allocation of resources within the transport sector. Transport sector follows the same supply and demand theory as other industries, while it has many unique characteristics – non-storability, economies of scale and scope, indivisibilities and the extensive production of positive and negative externalities – that need careful consideration in any analysis. In recent decades, transport economics and policy has seen major advances in methodology, covering such issues as estimating cost functions, modelling of demand, examining industry ownership and structure, dealing with externalities, pricing and investment decisions and measuring economic impacts.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Transport Economics & Policy**. Potential topics include, but are not limited to:

- Air transport industry
- Logistics
- Public transport
- Sustainable transportation
- Tourism
- Transport infrastructure
- Transport operations
- Urban transport policy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Transport Economics & Policy**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	December 28th, 2017
Publication Date	February 2018
