

Special Issue on Financial Modeling

Call for Papers

Financial modeling is the task of building an abstract representation (a model) of a real world financial situation. This is a mathematical model designed to represent the performance of a financial asset or portfolio of a business, project, or any other investment. Typically, financial modeling is understood to mean an exercise in either asset pricing or corporate finance, of a quantitative nature. In other words, financial modeling is about translating a set of hypotheses about the behavior of markets or agents into numerical predictions.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **financial modeling**. Potential topics include, but are not limited to:

- Quantitative finance
- Portfolio optimization
- Business valuation
- Capital budgeting
- Financial forecast
- Option pricing

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Financial Modeling**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	November 29th, 2018
Publication Date	January 2019
