## Special Issue on Structural Engineering

### Call for Papers

**Structural engineering** is mainly a sub-division of civil engineering in which structural engineers are trained to understand, predict, and calculate the stability, strength and rigidity of built structures for buildings and nonbuilding structures, to develop designs and integrate their design with that of other designers, and to supervise construction of projects on site. They can also be involved in the design of machinery, medical equipment, and vehicles where structural integrity affects functioning and safety. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in area of **structural engineering**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **structural engineering**. Potential topics include, but are not limited to:

- Steel and concrete structural design
- Smart structures
- Structural management
- Active and passive control of structures
- Structural dynamics
- Composite structures
- Soil structure interaction
- Computer aided design of structures
- Non-destructive testing of structures

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue –Structural Engineering**” should be chosen during your submission.

According to the following timetable:

Scientific Research  
*Open Access*

Open Journal of Civil  
Engineering

ISSN Online: 2164-3172

---

Submission Deadline	October 24th, 2017
Publication Date	December 2017
