

Special Issue on Concrete Technologies

Call for Papers

Concrete technology is important for the world's sustainable development with enhanced structural strength and durability. Modern reinforced concrete can contain varied reinforcing materials made of steel, polymers or alternate composite material in conjunction with rebar or not. Many different types of structures and components of structures can be built using reinforced concrete including slabs, walls, beams, columns, foundations, frames and more.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **concrete technologies**. Potential topics include, but are not limited to:

- Anti-corrosion measures
- Failure modes of steel reinforced concrete
- Prestressed concrete
- Steel plate construction
- Compressive strength of concrete
- Durability of concrete
- Cracked reinforced concrete
- Seismic performance of concrete

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Concrete Technologies**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	December 19th, 2017
Publication Date	February 2018

Scientific Research
Open Access

Open Journal of Civil
Engineering

ISSN Online: 2164-3172
