

## Special Issue on Forest Fire Prevention

### Call for Papers

The fire is the most dangerous and the most terrible enemy for forest. **Forest Fire Prevention** is the most effective methods of reducing the risk of fires, as well as lessening its severity and spread. Effective prevention techniques could manage air quality, maintain ecological balances, protect resources and limit the effects of future uncontrolled fires. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **forest fire prevention**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **forest fire prevention**. In this special issue, potential topics include, but are not limited to:

- Forest fire cause and variety
- Forest fire prevention, detection and suppression
- Forest fire fighting and rescue method and safety measures
- Forest fire hazard
- Fire retardant
- Forest fire propagation models

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly note that the “**Special Issue**” under your manuscript title should be specified and the research field “**Special Issue - Forest Fire Prevention**” should be selected during your submission.

Also please note the following timetable:

Submission Deadline	June 5th, 2014
Publication Date	August 2014
