

Special Issue on Forest Restoration and Regeneration

Call for Papers

A forest, also referred to as a wood or the woods, is an area with a high density of trees. As with cities, depending on various cultural definitions, what is considered a forest may vary significantly in size and have different classifications according to how and of what the forest is composed. Forests can be found in all regions capable of sustaining tree growth, at altitudes up to the tree line, except where natural fire frequency or other disturbance is too high, or where the environment has been altered by human activity. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **forest restoration and regeneration**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **forest restoration and regeneration**. In this special issue, potential topics include, but are not limited to:

- Forest ecosystem
- Forest loss and management
- Types of forests
- Forest distribution
- Forest regeneration measures
- Forest destruction factors

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Forest Restoration and Regeneration**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	November 20th, 2014
Publication Date	January 2015
