

## Special Issue on Hydrocephalus

### Call for Papers

**Hydrocephalus** can be described as a condition of the accumulation of cerebrospinal fluid and is usually caused by overproduction of the cerebrospinal fluid or blockage of cerebrospinal fluid outflow. It can be congenital or acquired as a consequence of various etiological factors. The typical symptoms are headache, vomiting, blurred vision, papilledema, double vision, dizziness and seizures. Even though shunt systems can successfully treat hydrocephalus, this therapy is too expensive for most people in developing countries.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **hydrocephalus**. Potential topics include, but are not limited to:

- Shunt
- Congenital hydrocephalus
- Acquired Hydrocephalus
- Symptoms of hydrocephalus
- Diagnosis of hydrocephalus
- The mechanism of hydrocephalus

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Hydrocephalus**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	November 23rd, 2017
Publication Date	January 2018
