

Special Issue on Arthroplasty

Call for Papers

Arthroplasty is an orthopedic surgery performed to relieve pain and restore the integrity and function of a joint by realigning or reconstructing the joint. There are two types of arthroplastic surgery: joint resection and interpositional reconstruction. Joint resection involves removing a portion of the bone from a stiffened joint, creating a gap between the bone and the socket to improve the range of motion. Interpositional reconstruction is procedure to reshape the joint and add a prosthetic disk between the two bones forming the joint.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Arthroplasty**. Potential topics include, but are not limited to:

- Cup arthroplasty
- Finger arthroplasty
- Hip arthroplasty
- Interpositional arthroplasty
- Joint replacement surgery
- Knee arthroplasty
- Ligament reconstruction
- Mold arthroplasty
- Osteotomy
- Resection arthroplasty
- Resurfacing arthroplasty
- Shoulder arthroplasty
- Silicone replacement arthroplasty

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Arthroplasty**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	February 18th, 2022
Publication Date	April 2022
