

## Special Issue on Vaccines and Immunology

### Call for Papers

Vaccines are biological agents made by bacteria, viruses, tumor cells and so on, which can produce specific immunity to the organism. The vaccine is used to make the receptor acquired immunity. Although smallpox has been successfully removed from the world, there are many diseases, such as polio, hepatitis B and so on, which have been greatly reduced after vaccination. Vaccines are of great importance to human health.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **vaccines and immunology**. Potential topics include, but are not limited to:

- Measles
- Vaccination
- Inactivated vaccine
- DNA vaccine
- Hepatitis B vaccine
- Immunogenicity
- Immunotherapy
- Immune system
- Immune and Antibody

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Vaccines and Immunology**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 31st, 2018
Publication Date	March 2018
